Executive Summary

Manuscript 1	Bio-Assessment Work - The Response of Fish and Benthic Macroinvertebrates to Ammonia Toxicity in Salt Creek
Manuscript 2	Salt Creek in situ Toxicity Testing Program
Manuscript 3	Salt Creek Ammonia Modeling
Manuscript 4	Supplemental Laboratory Testing and Quality Assurance/ Quality Control
Manuscript 5	Data Integration and Site-Specific Criteria Compliance
Manuscript 6	Regulatory Considerations

ACKNOWLEDGMENTS

The City of Lincoln would like to sincerely thank all those that have been involved in the Salt Creek Water Quality Studies Project over the years. This report contains separate manuscripts that describe in summary fashion the tremendous volume of data that has been gathered for Salt Creek since 1989. This report reflects the combined efforts of many dedicated people that have given the utmost of their professional time, labor, and skills to enable the Project to be brought to a meaningful closure. The City of Lincoln is truly proud of the accomplishments toward the advancement of water quality science and hopes that the information contained herein will be of immense long-term value for sound, environmentally protective watershed management.

Special thanks needs to be extended to the following members of the Water Environment Research Foundation Peer Review Panel for providing valuable scientific oversight that took us down many new avenues for examination and interpretation of the data:

> Patricia J. Haddon, Research Program Director Water Environment Research Foundation Alexandria Virginia

Norman E. LeBlanc, Co-Chair Chief of Technical Services Hampton Roads Sanitation District Virginia Beach, Virginia

Robert Berger, Co-Chair East Bay Municipal Utility District Oakland, California

Scott E. Belanger Principal Scientist Proctor & Gamble Experimental Stream Facility Millford, Ohio Jerome M. Diamond Tetra Tech, Inc. Owings Mills, Maryland

James R. Karr University of Washington Seattle, Washington Thomas G. Sprehe Vice President, Chief Environmental Engineering Div. KCI Technologies, Inc. Hunt Valley, Maryland

The consultant team consisting of Brown and Caldwell; EA Engineering, Science, and Technology; CH2M Hill; and Kelly & Weaver are to be highly commended for their steadfast professionalism and openness; their collective efforts to meticulously and consistently follow a sound scientific approach to problem solving; their abilities to derive and implement innovative, original research; their persistence in keeping abreast of regulatory and scientific developments; and, finally, for their on-going patience and commitment in dealing with such an extended project.

Salt Creek Water Quality Studies Project Team

L-R: Gary Brandt (City), Bill Rue (EA Engrg.), Randy Wilson (City), Norm LeBlanc (WERF Panel Co-Chair),
Bret Linenfelser (B&C), Jim Karr (WERF Panel), Cynthia Paulson (B&C), Sarah Reeves (B&C),
Scott Belanger (WERF Panel), Tom Jacobs (B&C), Jerry Diamond (WERF Panel),
Pat Haddon (WERF Proj. Director), Steve Masters (City), Mike Bastian (CH2M Hill),
Bob Berger (WERF Panel Co-Chair), Tom Sprehe (WERF Panel), Bob Weaver (Kelly & Weaver),
Lyle Christensen (City Proj. Mgr.), Kent Dixon (EA Engrg.)

The City of Lincoln also extends its appreciation to the staff at the Nebraska Dept. of Environmental Quality for their support and desire to seek innovative solutions; and thanks needs to go to all the other stakeholders, such as the Nebraska Game & Parks Commission, the U.S. Geological Survey, the Lower Platte South Natural Resources District, the Nebraska Department of Water Resources, and the University of Nebraska for the furnishing of valuable related data and their general assistance on complex technical issues.

Finally, thanks needs to also go to the dedicated Lincoln Wastewater System staff, who furnished a great deal of labor and expertise assisting with laboratory and field work and who have gained a heightened sense of "ownership" toward protecting the valuable resource that Salt Creek provides.

Lyle R. Christensen, P.E., City Project Manager
